"Isolation and identification by sequence homology of a cytosine methyltransferase from Arabidopsis thaliana.";

Nucleic Acids Res. 21:2383-2388(1993).

-!- FUNCTION: METHYLATES CG RESIDUES.

-!- CATALYTIC ACTIVITY: S-ADENOSYL-L-HETHIONINE + DNA =

--- HOMOCYSTEINE + DNA CONTAINING 5-METHYLCYTOSINE.

-!- SIMILARITY: LOW, TO OTHER EUKARYOTIC DNA METASE.

-!- SIMILARITY: SOME TO BACTERIAL RESTRICTION SYSTEMS

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                  seq

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The glycine/histidine/lysine-rich region of HWW kininogen light chain is im
Bradykinin, released from kininogen by kallikrein, is a potent vasodilator,
residue is present in the kininogen prior to the release of bradykinin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The HMW kiningeen precursor is produced from the same gene as the LMW form

A; Notice: article in Japanese

C; Comment: The HMW kininogen precursor is produced from the same gene as the LAW form

C; Comment: The HMW kininogen precursor is produced from the same gene as the LAW form

C; Comment: The glycine/histidine/lysine-rich region of HAW kininogen light chain is i

C; Comment: Bradykinin, released from kininogen by kallikrein, is a potent vasodilator

xyproline residue is present in the kininogen prior to the release of bradykinin.

C; Superfamily: kininogen; cystatin homology

        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score

HAWT KININOGEN PLAYS AN IMPORTANT ROLE IN BLOOD COAGULATION BY
HELPING TO POSITION OPTIMALLY PREKALLIKREIN AND FACTOR XI INTERPRETATION OPTIMALLY PREKALLIKREIN AND FACTOR XI RETTO
FACTOR XII; (3) HMW-KININOGEN INHIBITS THE THROMBIN-AND PLASMIN-
INDUCED AGGREGATION OF THROMBOCYTES; (4) THE ACTIVE PEPTIDE
BRADYKININ THAT IS RELEASED FROM HMW-KININOGEN SHOWS A VARIETY OF
PHYSIOLOGICAL EFFECTS: (4A) INFLUENCE IN SMOOTH MUSCLE
CONTRACTION, (4B) INDUCTION OF HYPOTENSION, (4C) NATRIURESIS AND
DIURESIS, (4D) DECREASE IN BLOOD GLUCOSE LEVEL, (4E) IT IS A
MEDIATOR OF INFLAMMATION AND CAUSES (4E1) INCREASE IN VASCULAR
PERMEABILITY, (4E2) STIMULATION OF NOCICEPTORS (4E3) RELEASE OF
OTHER MEDIATORS OF INFLAMMATION (E.G. PROSTAGLANDINS), (4F) IT HAS
A CARDIOPROTECTIVE EFFECT (DIRECTLY VIA BRADYKININ ACTION,
INDIRECTLY VIA ENDOTHERLIUM DERIVED RELAXING FACTOR ACTION); (5)
LAW-KININOGEN INHIBITS THE AGGREGATION OF THROMBOCYTES; (6) LAW-
KININOGEN IS IN CONTRAST TO HAM-KININOGEN NOT INVOLVED IN BLOOD

CHAIN
HMW-KININGEN PLAYS AN IMPORTANT ROLE IN BLOOD COAGULATION BY
HELPING TO POSITION OPTIMALLY PREKALLKREIN AND FACTOR XI (3) HMW-KININGEN INHERST THE THROMBIN AND PLASMIN-
INDUCED AGGREGATION OF THROMBOCYTES; (4) THE ACTIVE PEPTIDE
BRADYKININ THAT IS RELEASED FROM HMW-KININGEN SHOWS A VARIETY OF
PHYSIOLOGICAL EFFECTS: (4A) INFLUENCE IN SMOOTH MUSCLE
CONTRACTION, (4B) INDUCTION OF HYPOTENSION, (4C) NATRIURESIS AND
DIURESIS, (4D) DECREASE IN BLOOD GLUCOSE LEVEL, (4E) IT IS A
MEDIATOR OF INFLAMMATION DEAUSES (4E1) INCREASE IN VASCULAR
PERMEABILITY, (4E2) STINULATION OF NOCICEPTORS (4E3) RELEASE OF
OTHER MEDIATORS OF INFLAMMATION (E.G. PROSTAGLANDINS), (4F) IT HAS
A CARDIOPROTECTIVE EFFECT (DIRECTLY VIA BRADYKININ ACTION),
INDIRECTLY VIA ENDOTHELIUM-DERIVED RELAXING FACTOR ACTION); (5)
LMW-KININGEN INHIBITS THE AGGREGATION OF THROMBOCYTES; (6) LMM-
                                                                                                                                                                                                                                                                                                                  STRAIN-C57BL/6 x CBA; TISSUE=Liver; Takano M., Kondoh J., Yayama K., Okamo Molecular cloning of cDNAs for mouse

A VARIETY OF PHYSIOLOGICAL EFFECTS: (4A) INFLUENCE IN SMOOTH
MUSCLE CONTRACTION, (4B) INDUCTION OF HYPOTENSION, (4C)
NATRIURESIS AND DIURESIS, (4D) DECREASE IN BLOOD GLUCOSE LEVEL,
(4E) IT IS A MEDIATOR OF INFLAMMATION AND CAUSES (4E1) INCREASE
IN VASCULAR PERMEABILITY, (4E2) STIMULATION OF NOCICEPTORS (4B3)
RELEASE OF OTHER MEDIATORS OF INFLAMMATION (E.G. PROSTAGLANDINS),
(4F) IT HAS A CARDIOPROTECTIVE EFFECT (DIRECTLY VIA BRADYKININ
ACCITON, INDIRECTLY VIA ENDOTHELIUM-DERIVED RELAXING FACTOR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SEQUENCE OF 458-498
